

Innovative. Effective. Simple. Sustainable.

Clean water is more rare than you would expect:

- 2.6 billion people in the world lack adequate sanitation facilities, leading to water contaminated with deadly bacteria such as E. Coli.
- According to the WHO, nearly 900 million people lack access to clean drinking water
- Water contamination causes 2.2 million deaths a year — 1.3 million of these are children under the age of 6. In fact, Unicef and the World Health Organization estimate that a child dies *every 20 seconds* due to water-borne diseases.

You can provide a solution:

- A single in-home ProCleanse™ Water Filtration unit provides clean, safe water for a family of 4 — 6 every day for 10 years or more.
- The unit is capable of producing more than 180,000 liters (~48,000 gallons) over a ten year period at a cost of \$0.001 per liter.
- The end result is safe and clean drinking water for use in individual households around the world where the need is critical.

Patent-pending Point-of-Use (POU) device with built in safe storage that uses a proprietary blend of porous ceramic particles and a mixture of biocide materials to filter and deactivate microorganisms that cause diarrhea, cholera, and other life-threatening illnesses.

Ease of use: Water is poured into the first chamber through the diffuser and gravity drives water through the filtration media, providing clean, safe drinking water stored in the second chamber ready for use.

Key Benefits

- **Effective against Bacteria, Viruses and Cysts**
- **Clears water: reduces turbidity on average to less than 5 NTU's**
- **Ability to produce 4 — 8 liters (1 — 2 gal) per hour**
- **Built in safe water storage**
- **Easy to transport at less than 40 lbs pre-filled**
- **Requires no assembly — ready for use on day one**
- **No chemicals or energy required to operate**
- **No replacement parts**
- **Effective for more than 10 years**
- **Minimal maintenance required**
- **Residual disinfection benefit**

Your organization can make a difference! A single unit will help a family of 4 — 6 have clean, safe water for more than 10 years!

*Minimum 3 log reduction in E. Coli. **Minimum 2 log reduction in Cysts. ***Minimum 3 log reduction in MS-2. 1. Only when used with Colloidal Silver. 2. Only when used with Chlorine. 3. Dependent upon availability of Chlorine tablets, which are not readily available in all areas. Chlorination often results in bad taste/odor of the water.
